# Optical Character Recognition

Go from capture to completion with a scan

It's almost too easy to make errors when filling out forms at the job site. Serial numbers and barcodes together with adverse conditions and work gloves can lead to accidental typos and hours of wasted time for even the most thorough team member. With FastField's **Optical Character Recognition (OCR)**, these unforced errors can be a thing of the past. Use your device to scan the information you're looking to capture, and map the parsed text right to your form -- enabling you to complete your forms faster and with more accuracy than ever.

It's as easy as...

1 Scan equipment labels, barcodes, signs or photos

2 The OCR engine parses the text present in the image and target fields are assigned.

3 Your form auto-populates with the scanned information

Ready to give it a try?

Visit the **FastField website** to kick off your trial, or **contact** a FastField representative to learn more.
